

***Do teams with stronger offensive players score more goals? And do teams with stronger goalkeepers receive fewer goals?***

**Find the Data for the team with the highest offense rating and see how many goals they score compared to a team with a low offense rating**

- What I consider a high offense rating is 85 and up
- Anything under the rating of 85 will be a low rating
- I'll be making a loop with IF statement that will check which team has the most goals scored
- After we find the team we will check if the rating is above 85

**Find data for high-rated goalkeepers with EA FIFA ratings and see how many goals they've conceded compared to goalkeepers with low ratings**

- What I consider a high goalkeeper rating is 85 and up
- Anything under the rating of 85 will be a low rating
- I'll be making a loop with IF statement that will check which team has most clean sheets
- After we find the team we will check if the rating is above 85

**Can you predict what team is most likely to win the 2022 FIFA World Cup?**

- Only FIFA world cup qualification team's goals and clean sheets are counted toward FIFA predictions
- Make a variable called BEST TEAM then make IF statement
- Check if there's a team with the most goals scored and the least goals conceded( to get the difference between goals scored and conceded)
- For example: If brazil scores 20 goals and conceded 2 and Argentina scores 25 goals and conceded 10. Brazil's difference would be 18 and Argentina's difference will be 15, meaning we think Brazil will win by a difference
- IF we come against a team that has the same stats then we will go by their FIFA ranking

**What team has the strongest defense, midfield, and offense players?**

- We will define strongest by EA FIFA ratings
- Make a for-loop and compare each defense, midfield, and offense
